Lab assignment

- 1. Preparation tasks (done before the lab at home). Submit:
 - Completed 2-bit comparator truth table.
- 2. A 2-bit comparator. Submit:
 - o Karnaugh maps for all three functions,
 - Equations of simplified SoP form of the "greater than" function and simplified PoS form of the "less than" function.
 - Link to your public EDA Playground example in the form https://www.edaplayground.com/...
- 3. A 4-bit binary comparator. Submit:
 - Listing of VHDL architecture from design file (design.vhd) with syntax highlighting,
 - Listing of VHDL stimulus process from testbench file (testbench.vhd) with syntax highlighting,
 - Listing of simulator console output, i.e. with one reported error,
 - Link to your public EDA Playground example in the form https://www.edaplayground.com/...

2. A 2-bit comparator.

Karnaugh maps for all three functions

Equations of simplified SoP form of the "greater than" function and simplified PoS form of the "less than" function.

This is link to my EDA plaground example of 2 bit comparator

3. A 4-bit binary comparator.

Listing of VHDL architecture from design file (design.vhd) with syntax highlighting

```
-- Architecture body for 4-bit binary comparator

B_equals_A_o <= '1' when (b_i = a_i) else '0';
B_less_A_o <= '1' when (b_i < a_i) else '0';
end architecture Behavioral;

Listing of VHDL stimulus process from testbench file (testbench.vhd) with syntax highlighting

```
-- Data generation process
